ALL-LASER LASIK PROCEDURE.

« PEHP Health and Benefits Price

Retail Price \$ 2450.00 per eye/Bi-lateral
Procedure Price \$ 4900.00 both eyes

Wait! There's more . . .

Hoopes Vision is one of the most technologically advanced surgery centers in the world, specializing in the newest vision correction procedures. We understand that LASIK and PRK is not for everyone. The KAMRA® Inlay and SMILE procedures give us more options in our toolbox to help each person achieve the best visual outcome for their individual lifestyle. We are extremely happy to provide these new alternatives as part of the Corporate Perks Program.

KAMRA® inlay

Ready to ditch those pesky glasses and stop the hunt for misplaced readers?

The KAMRA® inlay is an advanced vision correction technology that may revolutionize the way presbyopia, or "after-40 vision" is treated. Hoopes Vision has been closely involved with this device since the early research phase, and was in fact the largest single participant in the FDA trials, in terms of patients treated.

The KAMRA™ corneal inlay is a device that restores near vision and frees patients from the constant frustrations of reading glasses. It is a small round ring, measuring 3.8 mm in diameter, which is placed in a small tunnel in the center of the cornea. Once placed, this ring is nearly invisible to outside observers. The KAMRA™ inlay allows patients over the age of 40 to see clearly in the distance as well as close up, reducing or eliminating the need for reading glasses, bifocals, or monovision. It is a safe, quick, and reversible procedure.

SMILE

The SMILE technique was FDA approved in the fall of 2016 and Hoopes Vision was the first center in Utah to perform this new procedure.

ReLEx® SMILE, an acronym for Small Incision Lenticule Extraction, is an innovative new method of performing laser eye surgery for patients that are nearsighted and may not have been LASIK or PRK candidates in the past.

SMILE is a technique where just one laser is required, the Zeiss Visumax. Based on the prescription of the patient, the laser will create a microscopic "lenticule" (disc of tissue) inside the intact cornea. The lenticule is then extracted through a small opening. One of the main advantages is that SMILE is not performed under a flap or at the surface, allowing for a quick recovery.

“

As a busy mom, wife, YouTuber, and blogger. I never have enough time in a day to accomplish everything I want. Dealing with the hassle of glasses and contacts was something I knew I didn't have time for. When I was ready for LASIK, I went to Hoopes Vision. After my surgery, I realized how quick and painless the procedure really was. I couldn't be happier. I should have done this a long time ago!

Patient Concierge

For those **PEHP Health & Benefits** employees and members that live out of state, don't worry we've got your back. We have partnerships with local hotels so you get a special rate on accommodations, too!

Every year, thousands of patients come to Hoopes Vision for LASIK, cataracts, ICL, or other vision correction surgery. Of those, hundreds come from out of state or from far enough away that an overnight stay is required. Fortunately, Salt Lake Valley is a great place to stay! Here are some local hotels with whom we have contracted discount rates for patients, as well as some of the many dining, shopping, and entertainment attractions near our facility in Draper. “

The miracle of laser vision correction...LASIK... and the glasses are gone forever. Dr. Hoopes has restored my eyesight to where it needs to be with a short, painless procedure. Now I don't have to reach for a pair of glasses when I get up in the morning. I can ride my bike or work out at the gym without heavy, thick glasses sliding down my nose or fogging up. I don't have to carry a pair of glasses and a pair of sunglasses with me and keep switching them back and forth.
